Dyna UV Wash 909

Dyna UV Wash 909 is a very effective cleaning agent for cleaning paint rollers stained with UV / LED or water-curing inks. This balanced blend of polar solvents provides excellent solubility for most UV / LED inks.

Dyna UV Wash 909 is based on VOC-free solvents and therefore causes slower evaporation compared to most other cleaning agents.

Dyna UV Wash 909 is ideal for cleaning rollers for varnishing with water-based or UV / LED lacquers, thanks to the polar properties of Dyna UV Wash 909. Balanced composition of solvents. Dyna UV Wash 909 is compatible with rubber compounds from the EPDM and NBR groups.

Characteristic:

- Fast and thorough cleaning;
- Does not contain volatiles (VOC FREE)
- Very slow evaporation
- Safe for EPDM and NBR rollers

Application:

Varnish rollers: Apply a sufficient amount of Dyna UV Wash 909, without slipping or drying of the rollers. Use a scraper to clean and continue washing until the rollers are clean.

Packaging:

Barrels / containers: 20L, 200L and 1000L

The agent is compatible with blends from groups

NBR and EPDM
